

Application Technology Centres

Igniting the
future of the
welding industry.

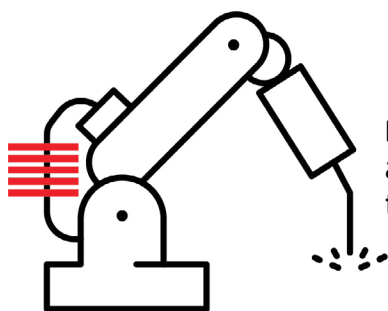

Supporting new ideas and concepts with customers, partners and industry.

Located in Brisbane and South West Sydney, our Application Technology Centres are leading the way in industry technical expertise – igniting the future of the welding industry with state-of-the-art welding and cutting processes and equipment.

At our Application Technology Centres (ATC), BOC Gas and Metal Fabrication Specialists develop tailored solutions for customers and conduct demonstrations, training and research. We also train our technical specialists across the region in new gases applications. Training organisations and customers also benefit from our centres, providing them with the opportunity to bring in teachers, students and staff to demonstrate the latest technology and products used in real applications.

Our recently upgraded Sydney ATC has been transformed into a world-class technical and applications training centre and can showcase our complete range of welding solutions, applications and gases technology. Our unique GMAW and GTAW projectors show a real welding arc, not just a simulation, allowing you to see first-hand the effects of changing shielding gases and welding parameters on the arc and the weld.

This centre is synonymous with Industry 4.0 principles. We are investing in technology to host industry partner sessions virtually so our customers around the South Pacific can keep up to date with the most recent technology and processes.

Businesses are adopting automation as an essential tool to remain competitive.

LIVE DEMONSTRATIONS

- Pipe welding
- Aluminium welding
- Lindoflamm heating
- Cryogenic cooling
- Automation
- Arc projectors

COMING SOON

- CO₂ applications
- Latest in unique onsite gas blending

GLOBAL REACH

BOC also has access to a global network of Application Technology Centres in Shanghai, Munich, Wolverhampton UK and Tonawanda NY USA. BOC in the South Pacific is keen to contribute to global research and development initiatives by using our Brisbane and Sydney facilities to evaluate new products and applications, and share local learnings and innovative solutions.
